This sale gives you a unique opportunity to own high-powered, coming two-year old, performance-packed bulls that are bred and raised from a proven program with years of experience in the bull producing business. We are also pleased to offer 100 commercial bred and open replacement heifers. CAIN CATTLE COMPANY BULL DEVELOPMENT

The first environmental step in developing a sound, fertile breeding bull is to provide proper forage for the dam. Our maternal herd is maintained primarily on improved Bermuda pastures and our calves are nursed on their dams for the first seven months of their lives in those large, lush fields. At about five months of age, the calves are given a high roughage creep feed to supplement their nutritional needs and to start making ruminants out of them.

All of our calves are given pre-weaning vaccinations and wormed about six weeks prior to weaning and booster shots are administered at weaning. Weaning weights are taken on the calves and they are bawled out in one pen with fresh water, hay, and creep feed.

After the bull calves are thoroughly weaned, they are sorted by breed and put in large pastures and fed Purina Accuration and high quality grass or hay, depending on the season. The bulls are maintained under these conditions until they are a year of age. At that time they are vaccinated and wormed, all yearling performance data, ultrasound data, and scrotal measurements are collected,

and any additional culling is performed. Then the bulls are kicked out into large, lush, hilly pastures to continue in their maturation and development. This stage of their life is the most revealing to us because it tends to separate the last few culls from the remaining high performing, sound footed bulls.

About two months before the bulls are to be sold, they are brought back into smaller improved pastures and sorted into smaller groups of 50 head or less and put back on a high roughage feed to add a little bloom to them for the sale.

We could easily put more fat on our bulls if we desired. You will notice from the ultrasound information in the catalog that most of the bulls scan with less than .20 tenths of back fat, and that is the way we like it. Our customers tell us that our bulls hold up, remain sound, and stay in optimum breeding condition while turned out.

The longevity of a breeding bull is directly related to the environmental processes that he was developed in, and we believe our bull program is solid.
